

CUSTOM Metric Cruiser Damper

The new Ohlins custom model for the global metric market is just about to hit the streets and will for sure change the way we look at comfort in this segment.

The new product is based on the very popular 46DRLS concept with a monotube, high pressure absorber with an internal reservoir in the main body.

The well proven length adjuster makes sure that the bike gets the right low "look" without losing comfort and performance. The damping action is also possible to increase as well as reduce in distinct steps.

The hose mounted hydraulic spring preload adjuster gives the rider the possibility to change the setting for the spring that will affect the ride height.

All these features combined with a new, customized design with titanium "look" details will for sure be an eye catching detail whenever you decide to park your ride at the local coffee shop.

FEATURES:

- Optional end eyes for lowering the bikes
Adj. range 0 mm to -12 mm standard,
-12 to -24mm optional end eye.
