

ROAD & TRACK SD PISTON RESERVOIR KIT

Our steering damper is conceivably one of the most copied products in our production line since the start in 1989. It has been an important ingredient in almost every successful racing team throughout the world and it has been a massive hit on the aftermarket since the launch.

With the new Steering Damper Piston Reservoir Kit the technological step to MotoGP bikes is finally gone and now you have the possibility to kit your bike with almost identical equipment.

The kit is developed to get maximum performance and constant behaviour despite high temperatures from your engine and hot racing conditions. The one piece through rod delivers a smooth feeling and the damping is immediate without any sudden unwanted vibrations.

The original Steering Damper is made for a large number of models and brands but the Kit is made for 6 different lengths at first. If you already have one of our Steering Dampers you can of course install the Piston Reservoir Kit. Find your nearest Authorized Öhlins Service Centre for a professional installation.

If there is one thing that you should kit your bike with to get great comfort and handling... our steering damper is the perfect choice.
